When considering your breather membrane, ask these 3 simple questions:

1- Do I need to vent my roof?
   No, Tyvek® Supro does not need any soffit, tile or ridge ventilation, therefore saving time and money.

2- Do I need an airspace between the insulation and breather membrane?
   Because the Tyvek® Supro membrane breathes, it does not need an airspace.

3- Does the product have the necessary approvals?
   Tyvek® Supro is fully BBA and IAB approved, suitable for use in all types of pitched roofs.

All breather membranes are not the same!

Choose the market leader Tyvek® Supro, the reference point in breather membranes.

Installation couldn’t be simpler

Tyvek® Supro can be installed:
- horizontally or vertically
- draped over the rafters (like IF felt) or under counter-battens
- laid in direct contact with the Insulation
- without the need for ANY roof ventilation accessories

Traditional ventilation (with HR underlay) | Airtight and vapour open

- Cold air movement
- Heat loss
- Minimized heat loss
- Cold air movement

- Natural venting
- Tyvek® Supro
- Tyvek® VCL SD2
- Airtight loft space
- Minimized heat loss

- Traditional underlay
- Cold air movement
- Heat loss

- Traditional underlay
