### **Product Features**

DuPont™ Cyrel® DigiFlow 1000 ECLF exposes high quality photopolymer plates up to a format of 900 x 1,200 mm  $(36" \times 48")$ .

The Exposure section is a clamshell design holding 24 UV-A fluorescent tubes with built-in reflectors. One vellow control tube illuminates the exposure bed for inspection of the plate surface. Unique to this exposure

unit is the DigiFlow chamber which can be easily opened and closed via the clamshell lid. Anodised temperature controlled bed, closed loop system that controls the exposure bed temperature, which translates into predictable and consistent exposures. The unit is fitted with a light integrator that compensates for the decrease in light output as the tubes age. To meet the demanding needs of high quality plates, the user can easily customise the 25 basic exposure set-ups.

Each tube is constantly monitored by a light guide, giving the operator a visual indication. There are three counters imbedded in the PLC to keep track of the number of hours the UV-A and UV-C tubes have been in operation.

The Post Exposure and Light Finisher section hold 19 UV-C and 20 UV-A tubes. The PLC allows the user to perform post exposure and finishing in a preferred sequence, or simultaneously. The post exposure and finisher section has 25 basic set-ups that can be easily customised by the user.
