DuPont™ Cyrel® DFS

MEDIUM HARD CYREL® FAST DIGITAL PLATE FOR EXCELLENT INK TRANSFER

DuPont Packaging Graphics

To help our customers gain competitive advantage in the global packaging graphics value chain.

DuPont Packaging Graphics continues to be a global technology leader in supplying flexographic printing systems. Our scientists continue to develop unique solutions based on new technologies to help our customers expand their business by taking advantage of new profitable packaging printing opportunities. DuPont Packaging Graphics portfolio of products includes Cyrel® brand photopolymer plates (analogue and digital), Cyrel® platemaking equipment, Cyrel® round sleeves, Cyrel® plate mounting systems and the revolutionary Cyrel® FAST thermal system.

Cyrel® DFS is the medium hard Cyrel® FAST digital plate for excellent ink transfer in combination with a much lower dot gain compared to other medium durometer plates.

Applications
- Flexible packaging
- Paper
- Tag & Label
- Folding cartons
- Beverage cartons

Product Features
- Exceptional exposure latitude allows single exposure without masking
- Excellent thickness uniformity
- Less make ready time on press
- High resistance to ozone and white light results in excellent storage capability

Printing ink and solvent compatibility
Cyrel® DFS offers excellent compatibility with solvent-based inks, water-based inks and also with many UV-inks.

Process of use
Cyrel® DFS is designed to work with Cyrel® FAST thermal platemaking. Expose the plate through the back to establish the floor and maximize sensitivity. Back exposure varies according to relief required. Remove the protective coversheet and image the plate with the Cyrel® Digital Imager (CDI). Expose the front of the plate surface. Process the plate in the Cyrel® FAST thermal system.
developer. Finish the plate in a light finisher to eliminate surface tackiness. Post-expose the plate to ensure complete polymerisation.

Mounting
Cyrel® Microflex mounting devices are recommended for mounting Cyrel® DFS plates. The double sided adhesive should first be applied to the cylinder or sleeve – not the plate – to ensure easier and precise laydown. The polyester base will maintain accurate register even with large plates.

Storage – Raw Material
Store unexposed plates in a cool area (4-32°C), away from direct sources of heat. Humidity control is not required. Cyrel® DFS is foam interleaved to provide maximum protection of the plate after manufacture, and during transportation and storage. Plates should be stacked flat. Plates should not be exposed to direct sunlight or excessive white light. Continuous exposure to very high ozone concentrations should be avoided.

Handling – Raw Material
Cyrel® DFS plates should be handled under UV free light; e.g. fluorescent tubes covered with amber sleeves.

Storage – Finished Plates
After printing, plates should be thoroughly cleaned with compatible solvent before storing. They may be stored on cylinders, sleeves or demounted and stored flat.
